Subject: MPC 6.b: ODOT 2023 Bridge Condition Report

Action Recommended: Information Only

ODOT 2023 Bridge Condition Report Background:

At the April 2024 MPC meeting, MPC members expressed an interest in hearing about seismic resilience on ODOT-maintained bridges in the MPO area. At the June MPC meeting, Bert Hartman, Bridge Program and Standards Manager, will present high level findings from the [2023 Bridge Condition Report](#) and the status of the Seismic Program in the Central Lane region.

ODOT's Bridge Condition Reports summarize bridge condition ratings on state highways and performance measures based on National Bridge Inventory and ODOT data submitted annually to the Federal Highway Administration. Mr. Hartman will provide an update to seismic projects on OR-58 and also an approach to addressing seismic resiliency on the I-5 corridor from Eugene northward.
